

Case Study:

Security Forces requires storage growth in existing footprint

Problem: Weapons are stored in aging military weapon racks, which do not accommodate multiple weapon types and optics attached to weapons. Space is at a premium with more storage required.

Objective: Design a system taking less floor space while adding growth and allowing storage of multiple weapon types in the same rack with optics attached.

Solution: MTM Business Systems designed a custom Combat Weapon Storage system on mobile carriages storing 500+ rifles, crew-served weapons, Motorola radios, M-2s and 300+ M-9s.

Our custom solution reduced the armory storage footprint required and allowed growth in the existing footprint with multiple types of weapons stored inside the same racks.
