

LOGICPlus™ Conversions

Children's Medical Clinic Dayton, OH
Another Success Story

Setting the New Standard

**CHILDREN'S MEDICAL CLINIC
DAYTON OHIO**

4:30 Friday Afternoon

3:30 Sunday Afternoon

7:30 Monday Morning

The Project

The records department at Children's Medical Center needed to replace their dual access mechanical assist mobile system with a new electrical mobile system. User safety and convenience had become a real problem in this active records area.

The Problem

The records department is a very busy area with no extra space. They didn't know how they would store records while the existing mobile system was removed and the new system was being installed.

And a tight budget meant this very important project might have to be put off until funds could be made available.

The Solution

Working with the local LOGICPlus™ Alpha Partner, Children's chose the LOGICPlus™ Conversion alternative.

That meant:

No files to store during the conversion

No downtime for the department

No disruption for patients or staff at the Medical Center

A great new system at a fraction of system replacement cost

The Result

After the department closed on Friday, the LOGICPlus™ team went to work and when the department opened Monday morning the staff had a state of the art computerized mobile system waiting for them.

No Wonder they are all smiling!!!!
