

Better Than Millwork

KWIK-FILE®

Mailflow Systems Furniture

Kwik-File®—more flexible, more durable

Compare the advantages of Kwik-File Mailflow Systems® Furniture to custom millwork:

Flexibility

- *Portability.* When faced with an unexpected move or relocation, simply take your Kwik-File sorters with you. No need to leave expensive built-ins behind!
- *Adjustable locking shelves.* The unique, patented Kwik-Shelf® system ensures that all shelves lock in place and won't fall out. Yet when needed, shelves adjust easily on 1/2" vertical increments for convenient reconfiguration of pocket size.
- *Accommodates oversize or undersize media.* Only Kwik-File offers 19 standard shelf sizes from 4" to 16" wide, and 12" or 15" deep. In addition, shelf supports adjust on 1" horizontal increments. Today's sorter, with 11" and 12" wide shelves for mail, can easily become a literature organizer tomorrow, with 9" or 10" wide shelves for standard-sized paper.
- *More mail space.* 18-gauge steel shelves and supports are only 1/16" thick, so there is more room for mail than with laminate construction.
- *Broad product offering.* Choose from nearly 200 sorter models.

, and better value than custom millwork.

Front cover: Typical mail stop with 60"W x 41"H x 15"D closed-back sorter.

Above: Two open-back sorters (48"W x 33"H x 15"D) allow pass-through mail from mailroom to lounges, reception areas, or corridors.

Left: Closed-back sorter detail. Sorting pockets range from 2 1/2" to 5"H in 1/2" increments, demonstrating the Kwik-Shelf System's flexibility.

Durability

- *Rugged steel construction.* Kwik-File features all-welded 18-gauge steel construction. Sorters have double-wall, triple-bend end panels for extra structural rigidity. And steel doesn't peel, crack, or discolor like laminate!
- *Backed with confidence.* All Kwik-File products come with a Limited Lifetime Warranty.

Value

- *Compare cost.* Kwik-File can work within your budget. You'll be surprised at how much value Mailflow Systems Furniture offers!

These advantages are good reasons to select Kwik-File Mailflow Systems Furniture for your mail center, mail stop, or literature storage needs.

Kwik-Shelf System: details that only a mail handler appreciates!

- The thumbcut speeds mail retrieval—and makes it easy to see if there is any mail in the pocket.
- Every shelf has a 45-degree flange which provides the perfect location for either Kwik-File self-adhesive or magnetic label holders, and creates a convenient reading angle. The angled flange also allows mail in the pocket below to be removed more easily than from a pocket with a 90-degree flange.
- Steel loops in the shelf supports provide $\frac{1}{2}$ " increments for adjustment, and guide the shelves into place, yet protrude only $\frac{1}{8}$ " into the pocket.
- The die-formed rail which forms the side of each shelf provides continuous support as the shelf is inserted, ensuring foolproof installation.
